Art Unit: 2835

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 1-26, drawn to a cooled electronic article, classified in class 361, subclass 719.

Page 2

- II. Claims 27-30, drawn to a method of making the article, classified in class29, subclass 832+.
- 2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case steps such as attaching and coupling are so broad as to be capable of producing a multitude of different articles.
- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.
- 4. During a telephone conversation with Mr. Travis on 2-27-03 a provisional election was made without traverse to prosecute the invention of group I, claims 1-26.

 Affirmation of this election must be made by applicant in replying to this Office action.

 Claims 27-30 are withdrawn from further consideration by the examiner, 37

 CFR 1.142(b), as being drawn to a non-elected invention.
- 5. The IDS references are made of record.
- 6. The drawings are objected to. Figure 3 actually has two figures. 3A and 3B might be employed.

Art Unit: 2835

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 5,15-18,22,25 and 26 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 5 and 22 which refer to a standard, which can be changed over time, depend on a variable and are therefore indefinite. Also, variations within the standard are possible. The claim 15/25 opening is confusing. It is not clearly stated in what member such is located. Please correct the claim language and explain by reference to the drawings. The claim 17 "optimized" is totally unclear as to precise structure and is therefore indefinite. The claim 18 opening is noted. Where is such seen in the drawings?

9. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

10. Claims 1,2,5,8-12,15 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by either Prasanna (1449 art) or French 2803166(see usPGpub 2002/0172010 of the same family cited herein).

Concerning Prasanna, such is explained first.

Art Unit: 2835

See figures 5 and 6. Board 18 with components, top and bottom sinks 14/16, thermal pads 52 and coupling member 66/68(a member in the final article) are shown. All other claimed elements are clearly present.

The French reference has a similar structure with elements 9 being the thermal coupling member. All else is clearly seen.

- 11. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 12. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over either Prasanna or the French reference 2803166.

Attachment of the parts by screws/etc., while not shown by the references, is old and well known and would have been obvious to employ to attach the parts together.

- 13. Claims 3,4,6,7,14,16,18,20,21 and 23-26 are not rejected on art and are therefore objected to (except for claims 16,18,25 and 26 which have 112 rejections).
- 14. Claims 19 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Prasanna or French 2803166 taken with the given "Draft Standard---Mezzanine" publication(1449 art).

Prasanna and the French reference show most details as explained in the previous paragraghs. The given publication such as on page 4 provides the carrier/mezzanine environment. It would have been obvious to one of ordinary skill in the art to obtain the

Art Unit: 2835

claimed details by using the Prasanna or French cartridge in the Publication teachings.

Similar fields renders such references compatible.

15. The non-elected claims should be cancelled.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Gerald P Tolin whose telephone number is 703-308-

3114. The examiner can normally be reached on M-F first friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Leo Picard can be reached on 703-308-0538. The fax phone numbers for

the organization where this application or proceeding is assigned are 703-305-1341 for

regular communications and 703-305-1341 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or

proceeding should be directed to the receptionist whose telephone number is 703-308-

0956.
